# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, Form 86ab, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

### MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on Forms 86ab is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 15 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

### EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

## COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth, Eighth, and Ninth Service Commands reported the highest morbidity from injury (about 55 per thousand). All other Commands reported rates of 40 or less per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. remained about the same in most Service Commands. The MDW reported the highest morbidity from these causes (130 per thousand), while the lowest was registered by the First Service Command (45 per thousand). All Service Commands except the Eighth and MDW had rates under 80 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases decreased in all Service Commands. The highest morbidity from these causes was in the Fifth Service Command (64 per thousand).

Exceptionally low morbidity from diarrhea and dysentery was reported in every Service Command, with none reporting a rate in excess of 12 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 28.4 per thousand strength for the week ending 17 August as compared with 30.0 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 85.5 per thousand.

PATIENTS REMAINING UNDER TREATMENT: 17 August 1945:

The number of neuropsychiatric cases remaining was 33,737 or about 700 less than at the end of the previous week. Non-battle injury patients remaining numbered about 49,400. The number of battle casualty patients remaining decreased by about 2700 to number 105,042.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ending 17 August there were 8,547 enlisted personnel discharged by CDD or about 1000 less than the previous week. Forty-four percent of these discharges were reported by General hospitals and 37 percent by Convalescent Hospitals. Included among the 8,547 CDD's were 2,439 neuropsychiatric cases.

ASSEMBLY STATIONS AND REDISTRIBUTION STATIONS

As shown on page 12 the all causes admission rate at stations which are functioning as Assembly Stations was 498 per thousand and that at Redistribution Stations was 615 per thousand as contrasted with 501 per thousand at all other stations. Likewise, the admission rate for neuropsychiatric disorders was 30 per thousand at Assembly Stations and 136 per thousand at Redistribution Stations. It should be noted that at most of the Assembly Stations and a few of the Redistribution Stations other activities are carried out.
